QUESTIONS TO ASK .

DNSFILTER

DNS FILTERING BUYER'S CHECKLIST

1. Questions to Ask Before Deciding If You Need DNS Filtering:

- Are we currently monitoring or controlling which websites our employees can access?

- Have we experienced any phishing, malware, or suspicious web activity in the past year?

- Do we have remote or hybrid employees who access the internet outside of our network?

- Are we confident that our current security tools are catching newly emerging threats?

- Do we have clear policies in place for acceptable internet use—and a way to enforce them?

2. Questions to Ask When Comparing DNSFilter to Other Solutions:

- How easy is it to deploy and manage this tool across our organization?

- Can we create different filtering rules for different departments or users?

- How quickly does the tool detect and block new threats?

- What kind of reporting and visibility does it offer?

- Will we need additional support or training to use it effectively?
